

## Pattern Correction: Julia #292

### Pattern

The pleat lines on the size 10 and 14 skirts are mis-marked on the first printing of the pattern pieces.

For the size 10 FRONT and BACK Skirt pieces, move Pleat Line A ¼" to the right, move Crease Line 1/8" to the right. Do not move Pleat Line B or Pleat Line A/B.

For the size 14 FRONT skirt only, use the attached template to remark your pleat lines.

### Instructions

For size 7 and when using 60" wide fabric, use the cutting layout for 60" fabric sizes 1-6 with the skirts next to each other.

## How to Determine Which Pattern Version You Have

As we find printing errors, we will make corrections to the subsequent printings of covers, instructions and patterns. We began including trackable version codes with the newly branded pattern covers and patterns with the navy and aqua branding. Make sure to check the version number for the item specified as the covers, instructions and patterns are all printed separately. Patterns released prior to the navy and aqua branding like those in the top pink band or paper envelopes do not have a code to track versions.

For covers, the version code is found on the back cover at the bottom. There will be a code like "CC3S-1". The last number, in this case 1, is the version of the cover. In this example, this is the first printing of the cover. From time to time, we may apply a sticker to the covers to fix an error between printings.

For instructions, the same version code is found in the bottom right-hand corner of each instruction page. Each sheet can be updated separately, so check each page.

For patterns, the same version code is found on each page of tissues. Each sheet can be updated separately, so check each page.
